

Risk Management

Project Scope

- We have a lot of ideas for different features, so a risk would be that this balloons and becomes an unmanageable amount of work
- Solution: Stick with the basic, main components first and then add in “nice to have” features towards the end once we have the main functionality down if we have more time
- Nice to have (future):
 - Multiple photos in one post
 - Video posts
 - Followers/Following list
 - Report forms (reporting post/account)
 - Notifications list
 - Post sharing
- Must:
 - Admin – list of all accounts
 - Admin – toggle by active/suspended
 - User – apply to become business account
 - Admin – view/accept business account requests
 - All – account login
 - Business – run an ad
 - Business – view metrics

03/04 Assessment:

- The biggest risk currently is that we don't have data flowing from end to end
- Solution: focus the upcoming week or 2 on connecting the data, application, and presentation tier to get database data on the front-end
